

Sydney Gahunia

Markham, ON | +1 416-550-5383 | sydneygahunia@gmail.com | linkedin.com/in/sydney-gahunia-b9a704318

Systems Design Engineering student who ships AI solutions end-to-end with Claude — every project below was built with Claude, and directed to build the right thing through prompt design, conversation-flow engineering, and scenario-based testing.

WORK EXPERIENCE

AI INTERN | Humber River Health, Toronto, ON

Jan 2026 - Apr 2026

- Led the design and prototyping of two **Claude-powered AI systems** automating support operations at a 700-bed acute-care hospital, owning each from requirements through working demo (detailed under Projects).
- Scoped before building: conducted structured staff interviews and analyzed call and ticket data to identify the highest-volume issues, workflow bottlenecks, and automation opportunities.
- Reported directly to the CIO; delivered demos and implementation proposals to senior management, translating technical architecture into operational efficiency, staff experience, and business impact for a non-technical audience.

APP DEVELOPER | Career Education Council, Markham, ON

Sep 2024 - Jan 2025

- Built functional iOS apps in Swift and Xcode following Apple Human Interface Guidelines; pitched an original health-tech app to an industry panel.

PROJECTS — BUILT WITH CLAUDE

"SYDNEY" — AI IT HELP DESK CHATBOT | Humber River Health

Mar 2026

- Built with Claude a full-stack chatbot (**Claude API**, Python/FastAPI, React, Docker) that diagnoses login, network, printer, email, and VPN issues for 700+ hospital staff and auto-escalates unresolved tickets to IT support.
- Made Claude answer the right thing: engineered a **RAG pipeline** over official hospital procedure documents and wrote the system prompts, conversation flows, clarification questions, and fallback handling that keep responses grounded and escalation safe.
- Validated against simulated staff scenarios measuring accuracy and usability, then iterated on prompts and flows based on results.

AI HOSPITAL SWITCHBOARD VOICE AGENT | Humber River Health

Mar 2026

- Built with Claude a **voice agent** for caller intent detection, department routing, and on-call physician lookup — targeting the highest-volume call types.
- Designed confirmation, fallback, and escalation flows for unclear or urgent calls with safe handoff to human operators; ran end-to-end tests with simulated caller scenarios to validate routing accuracy and response timing.

SVT MONITOR | Personal Project | github.com/sydneygahunia-wq/svt-monitor

2024 - Jan 2025

- Built an iOS app end-to-end **with Claude** (SwiftUI, HealthKit, SwiftData, Swift Charts) that reads live Apple Watch heart-rate data and flags possible Supraventricular Tachycardia episodes — created to manage a personal SVT diagnosis.
- Designed detection logic that triggers on a sustained high heart rate or a sudden spike and ends only once readings settle, verified with automated unit tests; each episode logs timestamp, duration, and peak BPM in a clear, patient-friendly interface.

TEACHING & COMMUNITY

PRESIDENT, STEM EDUCATION TEAM | Unionville High School

Sep 2023 - Jun 2025

- Designed and led hands-on STEM workshops — Micro:bit coding activities and science experiments — for 1,000+ elementary students, making technical concepts engaging for complete beginners.
- Trained new student executives to lead workshops and communicate effectively with young audiences.

ENGINEERING AMBASSADOR | University of Waterloo

May 2026 - Present

- Represent Waterloo Engineering in outreach — tours, shadow days, events, and virtual chats guiding prospective students and families.

SHAD CANADA | Toronto Metropolitan University

Jul 2024

- Selected for a competitive month-long STEAM and entrepreneurship program; co-developed a renewable-energy water-heating product on a team design project.

SKILLS

AI / LLM: Anthropic Claude API, prompt engineering, Retrieval-Augmented Generation (RAG), conversational and voice agents, NLP

Languages: Python, Swift, C++, Java, JavaScript, SQL, HTML/CSS

Infrastructure & Tools: FastAPI, REST APIs, React, Docker, Nginx, Azure, ElevenLabs, Retell AI, Cursor, Copilot, GitHub, Microsoft Word, Excel, PowerPoint, Google Suite

EDUCATION

UNIVERSITY OF WATERLOO | BAsC, Honours Systems Design Engineering (Co-op)

Sep 2025 - Present
